Are there are topics you would like to see covered at a future use MY data webinar?

5 responses

- Information on SPINE
- The benefits and risks of a centralised health and social care data repository to support research
- Role of data as evidence in clinical trials and regulatory decision-making. How patients can be part of this, other than just being 'data subjects' (eeugh). Tranbslating that evidence into wider clinical benefit.
- Non English administrations (Wales, Scotland, NI)
- the visibility of PPI contributors

Any further comments

5 responses

- This webinar was absolutely professional, and the speakers are to be congratulated on this achievement. Very polished.
- I really enjoyed the event, the talks were interesting and from a good range of perspectives.
- The field of patient involvement and the field of data transparency do not yet fully overlap. Not sure what that implies, maybe not anything.
- I think this particular webinar was atypical for use MY data as it intended to include a wide range of speakers. Would be good to return to much more in-depth on some topics eg Helen Bulbeck
- Excellent webinar. Speakers were so interesting and informative and just right amount of time for each speaker. Thoroughly enjoyed it

Are there any groups/organisations who you think we should be in contact with to promote our work?

5 responses

- NIHR
- Asthma and Lung UK
- No
- Get HRA supporting use MY data in its shared commitment to patient involvement
- All cancer based charities, hospitals
